

Simplus Webinar Day 1 Summary

Hope you have enjoyed the webinar, don't hesitate to ask us your questions.

You can find the videos which we watched together in the link below:

<https://robosimplus.ml/swd1>

In the rescue simulation, you receive scores based on 2 main factors;

- ✓ Victim detection
- ✓ Exploration.

Today you learned about navigation and now we want you to write a code for your robot to explore the world model named “[day1 WorldModel.ttt](#)” which you can find by [link \(here\)](#).

Make sure to send your codes before the start of tomorrow's meeting.

Your mission is to explore the world, if you could go in the middle of each checkpoint tiles (Silver tiles) you will get 10 points.

Hint:

- ❖ You need to change the world model as we discussed in the webinar
- ❖ Feel free to use instructions both in the website and in the tutorial codes provided [here](#).
